

BLAGOJE GOVEDARICA,

According to Institute of Prehistory in Heidelberg: you are a "Honorarprofessoren, apl. Professoren und Privatdozenten"; with this email address blagoje@govedarica.de. According to what you claim to be: "A member of the Bosnia and Herzegovina Arts and Sciences Academy" (Center for the Balkan Studies). According to the text published on April 19, page 10, in Oslobođenje: you are "The most Eminent Pre-Historian in Europe". According to The Prehistoric Society - Book Review by John Chapman: ".....It is the merit of Blagoje Govedarica's volume...." But, "The views expressed in his review are not necessarily those of the Society or the Reviews Editor".

Congratulations Blagoje, I see that you are a "pre-historian"; I respect that. The jabbering of Vuk and Irna; and the "Oslobođenje's" claim that you are "The most Eminent Pre-Historian in Europe" may be surprising especially to your superiors in Heidelberg whom, I know from the DAIK (Deutsches Archäologisches Institut Kairo), to be competent and modest!!!

Now I can clearly see that you have no scientific qualifications to pass an opinion on pyramids: nothing in your biography and modest bibliography indicates that.

But, excuse me, I do not think that you were a petty officer driver mentioned on line? Who was detained by the Police?

Your latest assault on me (4 April 2009) sent by Irna, shows that you insist on being a weak player. My reply shall be educational and constructive for the reader who wants to learn:

In our science, features demonstrating the following items are pyramids:

Subjective:

Properties of: geometry, stability and orientation.

Terms for: identity, divisions, subdivisions and sub subdivisions.

Concepts: monumental, historical and religious.

Local scenarios: as in Mexico, China and Bosnia.

And Objective aspects considering:

Geology: of the site.

Archaeology: of the feature.

Architecture: of the construction.

These items are present at the pyramid hill at Visoko. Here a pre-historian has the role of an educated layman. Mr. Govedarica you focus on blowing your own trumpet and on discrediting the discoverer. So, by comparison: where are the opponents of Galileo and Schliemann. You are only supported by kids and hidden bloggers who are insulting me. The following descriptions which I am suggesting are: from your previous messages by Fax and email.

Remember Mr. Professor, that you were talking ABOVE YOUR HEAD:

- You pretended to speak for the Bosnian People. Do you represent them?
- Your first message was not an invitation from the academy for Nabil Swelim to write for the Year book; it was from your person with no authorization!
- You were offering me unlimited space and illustrations; this does not happen in academic journals. So I doubted the truth of your offer.

As an arrogant and biased opponent who is disturbed by the pyramid hill at Visoko, how can I respond positively to your letter especially when:

- You were mocking about my radio interview with Astraea, my TV interviews in Bosnia and my preliminary description of the pyramid hill.
- You replied by saying that you know how the pyramid hill looks from every angle!!! Then I learn that you never set foot in Visoko?
- You know how young Vuk made a fool of himself at the ICBP and how Irna was in hiding.
- I wonder why you avoided confronting me five times.
- When my initial report (52 pages) was published on line, no scientific reviews came from you!!! Alas it was from an amateurish Irna who is currently being hinted; all will be published in good time.

Today you will regret daring to challenge other scholars because of their nationality; especially Nabil Swelim. I am very proud of being an Egyptian pyramid scholar; I study pyramids worldwide and I did not volunteer at Visoko to promote tourism, better experts like Chris Norman and the other speakers at the ICBP are working on that.

Professor Blagoje, be aware of this:

- Scientifically: you are not qualified for pyramid science.
- Personally: you are unfit to judge the pyramid hill at Visoko.

Mr. Blagoje, until you behave scientifically like a gentleman, I do not wish to share that cup of nice Bosnian coffee with you. Now I have to go public with all your messages; everybody has to know how rude you were to me. You warned me not to do that, but here we go.

Nabil Swelim
Heliopolis, May 7 2009
